

Don't let AV get lost on your project's map to success!

Does it sometimes seem like AV is designed in a vacuum? We pride ourselves on the fact that our audiovisual designs are coordinated with our MEP and Low-Voltage Departments to deliver clients a teamwork-based, fully leveraged audiovisual experience.

At JB&B we see AV as more than just a tool. For us, it's a means of creating integrated user experiences by implementing fully coordinated design scenarios. We work diligently with clients to create dynamic and accessible AV systems that support each project's unique technical and operational goals.

We specialize in:

- Infrastructure
- Residential
- Commercial High-Rise
- Higher Education
- Museums and Cultural
- Life Sciences
- Healthcare
- Hospitality

PROJECT HIGHLIGHT

At SUMMIT One Vanderbilt, our AV team worked diligently to coordinate the flagship LED video wall down to the quarter inch for a perfect fit within this cutting-edge space's mirrored room. We worked hand-in-hand with the architectural team to coordinate the mirrored ceiling devices for optimal performance with minimal visual impact as well as with the operations team to ensure that the system promised both a smooth opening and equally smooth ongoing operation.

Turn to JB&B for your next project and see how its technical possibilities can be unleashed by an incisive and innovative AV consulting partnership.
