

# ENVIRONMENTAL COMPLIANCE SERVICES

JB&B Environmental's focus is to provide consultation and technical services that help our clients remain compliant with federal, state and local laws, regulations, and industry guidelines governing their facilities.

Many state and local governments continue to institute new environmental regulations to provide a safe environment to live, work and play in. Our focus is to help our clients manage the implementation of these new requirements. Mandates such as chemical storage and annual Right-to-Know reporting, domestic water tank inspections, discharge permits, and fuel oil testing are a few of the valuable services that will help clients properly maintain their systems and keep their facility safe, compliant and operating efficiently.

## CRITICAL AREAS OF CONCERN

- Regulatory compliance, permitting and certification
- Air quality and industrial hygiene
- Environmental health and safety
- Hazardous environments and waste

## SERVICE HIGHLIGHTS

- Technical consulting on use, storage and disposal of hazardous materials and chemicals
